9 August 2010

Dear Shareholder

Medigard listed on the ASX in February 2004 with the purpose of designing safety medical devices, in particular with the focus on delivering a safety retractable syringe. Since then, Medigard has come a long way in designing and developing a number of safety medical devices as well as an intravenous valve and a flash back needle.

Importantly, Medigard's two core products, its Blood Collection Device and its 3mL Safety Auto-Retractable Syringe are now ready for commercialisation. Recently, Medigard signed two important manufacturing and distribution agreements with US partners for the Blood Collection Device. These partners also have the first right of refusal over a number of Medigard's products including the Auto-Retractable Syringe.

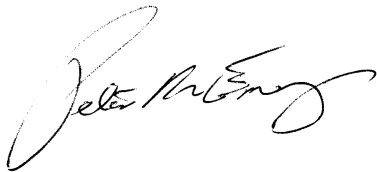

Medigard recently issued a Rights Issue Prospectus to its shareholders to raise funds for the production tooling and assembly equipment for Medigard's Blood Collection Device and for its 3mL Safety Auto-Retractable Syringe, and for the development of Medigard's suite of other products.

In order to inform our North Queensland shareholders of Medigard's development and the Rights Issue, the Company will be holding an information presentation in Cairns. The details are:

Sebel Hotel
17 Abbott Street, Cairns
5.30pm for 6.00pm
Friday 13 August, 2010
RSVP 07 5528 0370

We hope that you will be able to attend this function. We encourage you to invite your friends and interested parties to join us at the presentation.

Yours Sincerely

Peter Emery

CEO
